Changyeon Jo

Staff Engineer
Samsung Electronics   Email: changyeon.jj@gmail.com
34, Samsungjeonja-ro, Hwaseong-si, Republic of Korea   Homepage: https://changyeon.net

EDUCATION

Seoul National University, Seoul, South Korea
Ph.D. in Computer Science   Mar 2012 - Aug 2021
Thesis: *Remote Memory for Virtualized Environments*
Advisor: Prof. Bernhard Egger

Hanyang University, Ansan, South Korea
B.S. in Computer Science   Mar 2008 - Feb 2012
Capstone Project: *Musical Chords Generation for Given Melody using HMM*

INDUSTRY EXPERIENCES

Samsung Electronics, Hwaseong-si, South Korea   Sep 2021 - Present
Memory Software Development Team
Staff Engineer

WorldQuant, Seoul, South Korea   Jun 2019 - Aug 2019
Research Consultant

RESEARCH EXPERIENCES

ETH Systems Group, Zürich, Switzerland   Mar 2018 - Jun 2018
Visiting Ph.D. Student
Project: Adding modern x86 processor support to Barrelfish OS hypervisor.
Advisor: Prof. Timothy Roscoe

PLASSE Lab, Hanyang University, Ansan, South Korea   Jul 2010 - Jun 2011
Undergraduate Intern
Project: Survey on program analysis techniques.
Advisor: Prof. Kyoung-Goo Doh

PROJECTS

Instant Virtual Machine Live Migration   2020 - Present
Remote memory gives unique opportunity for virtual machine (VM) live migration by eliminating the memory copy required to move a VM to another machine. In this project, we proposed an optimized VM live migration technique for remote memory environments. Our technique completes a VM migration less than a 100ms for variety of workload scenarios.

Remote Memory for Virtualized Environments   2018 - 2020
Using remote memory for efficient resource utilization is rapidly getting attention with the rising popularity of high-performance network. In this project, we proposed a tailored remote memory for virtualized environments. Our system reduced remote paging latency by 41.7x at the tail and improved job execution time by 3.5x under intensive remote paging scenarios.

Machine Learning Approach to Live Migration Modeling   2015 - 2017
VM live migration is the foundation of seamless management of cloud services. However, predicting its key performance metrics is notoriously difficult due to its complex behavior. In this project, we proposed a machine learning (ML) approach to live migration modeling. With the 40,000 VM live migration data, the ML model showed 2 to 5 times better prediction accuracy than the state-of-the-art analytical model.
Project page: https://csap.snu.ac.kr/software/lmdataset

VM Checkpoint, Restoration and Live Migration Techniques   2012 - 2015
VM state management is an essential feature for optimizing user experience in virtualized environments. In this project, we proposed fast and space efficient techniques for checkpoint, restoration, and live migration. The proposed techniques reduced VM management overheads by 30% on average in the evaluation with real applications.
