INDUSTRY EXPERIENCES	MangoBoost Inc. , Seoul, South Korea <i>System Software Engineer</i> Led a team of 10 engineers responsible for system-level performance evaluation and validation of DPU products, with a focus on network scalability and throughput. Directed the company's MLPerf Storage v1.0 and v2.0 benchmark submissions, demonstrating 6.2× higher GPU scalability than competing solutions. Expanded into AI infrastructure by architecting a GCP-based performance analytics platform for on-premise LLM inference services (vLLM, SGLang). Earlier, developed host device drivers and system-level validation for an in-house RoCEv2 IP.	Nov 2022 - Present
	Samsung Electronics , Hwaseong-si, South Korea <i>Staff Engineer, Memory Software Development Team</i> Led the architecture design and implementation of a cloud data pipeline that ingests, cleans, and processes real-time SSD diagnostic data collected globally, and developed failure-pattern analyses and prediction models over approximately 10 years of accumulated data.	Sep 2021 - Oct 2022
	WorldQuant , Seoul, South Korea <i>Research Consultant</i> Developed stock price prediction models using WorldQuant's internal alpha research tools.	Jun 2019 - Aug 2019
EDUCATION	Seoul National University , Seoul, South Korea <i>Ph.D. in Computer Science</i> Thesis: <i>Remote Memory for Virtualized Environments</i> Advisor: Prof. Bernhard Egger	Mar 2012 - Aug 2021
	Hanyang University ERICA , Ansan, South Korea <i>B.S. in Computer Science</i>	Mar 2008 - Feb 2012
RESEARCH EXPERIENCES	ETH Systems Group , Zürich, Switzerland <i>Visiting Ph.D. Student</i> Advisor: Prof. Timothy Roscoe	Mar 2018 - May 2018
	PLASSE Lab , Hanyang University ERICA, South Korea <i>Undergraduate Intern</i> Advisor: Prof. Kyoung-Goo Doh	Jul 2010 - Jun 2011
RESEARCH PROJECTS	Instant Virtual Machine Live Migration Placing a virtual machine (VM) on a shared memory pool eliminates the memory copy that dominates live migration cost. Proposed an optimized VM live migration technique for such RDMA-based remote memory environments, completing a migration in less than 100ms for memory-intensive workloads.	2018 - 2021
	Remote Memory for Virtualized Environments Memory fragmentation across nodes leaves capacity unused, and a workload that does not fit in local memory falls back to disk. Built a software-based memory pool for virtualized environments, letting nodes share memory across an InfiniBand fabric via RDMA NICs. The system reduced remote paging latency by 41.7x at the tail and improved job execution time by 3.5x under intensive remote paging scenarios.	2018 - 2020

Machine Learning Approach to Live Migration Modeling 2015 - 2017
Predicting the key performance metrics of VM live migration is notoriously difficult due to its complex behavior. Proposed a machine learning approach to live migration modeling; trained on 40,000 migration records, the model showed 2 to 5 times better prediction accuracy than the state-of-the-art analytical model. The resulting paper has been cited over 100 times.

Project page: <https://csap.snu.ac.kr/software/lmdataset>

VM Checkpoint, Restoration and Live Migration Techniques 2012 - 2015
Proposed fast and space efficient techniques for VM checkpoint, restoration, and live migration, reducing VM management overheads by 30% on average in the evaluation with real applications. The resulting paper has been cited over 100 times.

GRANTS

Young Researchers Exchange Program between Korea and Switzerland, Swiss State Secretariat for Education, Research and Innovation (SERI), 2018

ACM SIGMOD Travel Grants, ACM Symposium on Cloud Computing, 2017

TEACHING EXPERIENCES

Teaching Assistant, Seoul National University 2012 - 2018
Eight semesters of System Programming (4190.203, M1522.000800) and Computer Architecture (4190.308).

PROFESSIONAL SERVICES

Artifact Evaluation Committee, *International Conference on Languages, Compilers, Tools and Theory of Embedded Systems (LCTES)*, 2019

External Reviewer, *IEEE Transactions on Cloud Computing*, 2015

DOMAINS

LLM inference serving (vLLM, SGLang), RDMA networking and congestion control, collective communication libraries, memory and storage disaggregation, DPU and SmartNIC software stacks, Linux kernel, SPDK, virtualization, system performance engineering and benchmarking, cloud data pipelines, ML for systems
